6809 SYSTEM

For the user who appreciates the need for a bus structured system using STATIC RAM and powered by a ferro resonant constant voltage transformer, DMA transfers, high speed MMU, we have the UNIFLEX-VN 68020 development system.

The system CPU provides protection to the system and other users from crashes caused by defective user programs.

The system's intelligent serial I/O processor boards significantly reduce system overhead by handling routine I/O functions.

The UNIFLEX VN Operating System is a demand-paged, virtual memory operating system written in 68020 Assembler code for compactness and efficiency. It allows up to 4 Megabytes of Virtual Memory per user. All systems include 1MB of static RAM, one 3-port intelligent Serial I/O board, DMA Controllers, a 5" 80 track floppy drive.
